CARBON GEL VENTO

BY MARCUS EHNING

ELASTIC pro-jump SHORT VENTO

VELCRO pro-jump SHORT VENTO

THE FIRST CANNON BONE PROTECTOR THAT GUARANTEES DOUBLE VENTILATION.

THE FIRST JUMP-ENHANCING BOOT THAT GUARANTEES DOUBLE VENTILATION.

Marcus Ehning

More dangerous than any impact is the effect of heat buildup on your horse's legs. The Veredus® VENTO releases heat through their exclusive double ventilation system.

- Double ventilation
- Tendon protection in carbon + nitrexgel
- Quick-release tip
- Anatomically-shaped shell

Pro Jump Short Vento is a functional fetlock boot that helps improve performance, thanks to its effect on horses' hind leg action. Using the VENTO system, characterized by double ventilation, the horse's tendons are kept cool as the heat is channelled to the outside by the 3D mesh ducted fabric.

- Fetlock guard with anatomically shaped shell in polyurethane.
- AEROX microperforated neoprene internal padding, edged in Lycra
- 3D Mesh ducted fabric
- Waterproof - the boots don't absorb humidity
- Velcro® Interchangeable strap to secure

TENDON AND FETLOCK BOOT IN CARBON + GEL

First Prize winner for the best innovative product at 2006 Spoga Köln

Certification Institute for Quality Management in EU - EN ISO 17025

The first horse protection certified by RCT - RICOTEST, the foremost Sporting Goods and Testing Institute in Italy

Scott Brash

- Anatomic design gives more freedom of movement to joints, while providing maximum comfort and support.
- Dual Density Shell provides more protection. The main shell is composed of semi-rigid polyurethane while the rear "X" shape is rigid polyurethane (applies only to front boots).

- The Carbon represents an impenetrable barrier against any type of dangerous objects, providing absolute protection for the flexor tendon, an area particularly exposed to being hit by shoes of the hind feet.
- The shock-absorbing properties of the gel reduce the transmission of shocks and impacts by 40%.

THE FETLOCK PROTECTOR THAT FOLLOWS THE RULES

Pro-Jump is a professional fetlock boot, specifically designed to improve performance of the hind legs over fences. The Pro-Jump boots should be used several times at home while jumping, in order to observe the horse's reaction to the boots. For best results, these boots should only be used occasionally at home and competitions.

- Fetlock guard with anatomically shaped shell in polyurethane.
- Does not absorb moisture, and is easily hand washable in cold water.
- 6 mm thick neoprene internal padding, lined and edged in Lycra®.
- Interchangeable straps and Velcro® brand fasteners, fixed with tamper-resistant stainless steel screws.

• **Ventilation:** Heat released from the horse's legs passes through the AEROX layer and is then distributed in the 3D mesh ducted fabric. Air is tunnelled through inlets as the horse moves which directs accumulated body heat outwards.

- **Microperforated Neoprene AEROX:** This allows the horse's skin to breathe, avoiding sweating and overheating of the tendons.
- **All-Terrain Protection:** The boots don't absorb or retain water, meaning they stay dry despite weather and terrain conditions.
- **Reduced Weight:** Despite offering extremely robust protection, the boots are lightweight which allows greater freedom of movement and flexibility.
- **Shock Absorber System:** Highly protective pads in polyurethane foam help reduce the shock felt during high impact.

Piaffe
SHIELD

Revolutionary overreach boot designed for protection of the entire heel area. Useful for every discipline and can be used on all surfaces. The particular anatomic shape and protective material guarantees a perfect fit on the horse's heel to give total protection.

* Not recommended for horses with very low heels.

- Anatomically designed protection in an elastic material that conforms perfectly to the horse's foot, therefore eliminating rotation of the overreach boot itself.
- Double point fastening to ensure a secure fit.
- Extra-carbon protection on heel area, which is at particular risk of injury and bruising.
- Quick-release tips in non-deformable FLEXTAN with stainless-steel hooks.

The **Veredus[®]** research department, with the technical support and expertise of international champions, has created a dressage boot to protect the cannon bone and tendon. These boots offer the perfect combination of functionality and design elements in a winning mix of technology and elegance.

- Form fitting shell guarantees maximum comfort and perfect positioning on the horse's leg.

- "X" shape: the rear of the boot has EVA foam covered by polyurethane which ensures maximum protection for the flexor tendon, an area at particular risk for bruising and injury.
- Breathable neoprene, Aerox, allows the leg to breathe, easily avoiding overheating of the tendons.
- Innovative quick release fastening ensure outstanding stability and optimum positioning of the tendon boot on the horse's leg.
- Fasteners with stainless steel hooks make for quick fastening/releasing even with one hand, while at the same time provide maximum anchoring safety, preventing the possibility of accidental release during workouts.

STABLE-BOOT evo

A FASTER AND EASIER ALTERNATIVE
TO TRADITIONAL BANDAGES.

- Aerox breathable outer shell has removable and washable lining made of DFD (Dry Fast Dry®), a highly absorbent fabric that is able to remove any moisture from the leg incredibly fast, leaving the skin dry.
- Provides support for suspensories and tendons eliminating after work out swelling while avoiding dangerous bandaging mistakes.
- The *Velcro*® closures provide secure easy to use closure, with elastic support providing comfort as well
- Practical and functional avoiding the time consuming preparation and cleaning of traditional bandages.
- Fetlock protector in polyurethane reduces wear insuring that these boots will last.

MAGNETIK

INNOVATIVE BREAKTHROUGH THERAPY SYSTEMS

What is Magnetic Therapy?

Magnetic Therapy is a non-invasive drug free treatment of injuries. The magnetic fields stimulate blood flow and at the same time also help with cellular growth and ligaments repair. Because of their polarity, magnets draw blood to the area that they are placed in.

How does it work?

The cells, whose fundamental task is the production of energy, have an electric voltage that feeds a coordinated activity on a level of tissues and organs. In a situation of internal or external injury, cell activity is compromised and the consequences are inflammation, pain, etc. The creation of a magnetic field by means of permanently magnetized NEODYMIUM plates having several polarities helps restore the biological energy, slowing down the physiological deterioration of tissues.

Effects of magnetic fields:

The magnetic fields favor and facilitate lymphatic and blood microcirculation, the change and use of nutrient substances by the cells, the natural biological defense system and the elimination of metabolic waste matter. Moreover, the magnetic fields provide significant benefits in all inflammatory processes which are often accompanied by pain. The benefit is obtained through a reduction of the inflammatory process and, at the same time, an analgesic action with respect to the tissue nerve fibers.

Indications:

Magnetotherapy also stimulates vasodilatation, i.e. increases the blood flow to the injured part, speeds up the elimination of dead cells and toxins, relaxes the muscles and reduces swelling. The static magnetic energy also stimulates the production of ELASTIN and COLLAGEN, which are indispensable elements for the reconstruction of tissues.

MAGNETIK STABLE-BOOT EVO

- Aerox breathable outer shell has removable and washable lining made of DFD (Dry Fast Dry®), a highly absorbent fabric that is able to remove any moisture from the leg incredibly fast, leaving the skin dry.
- Provides support for suspensories and tendons eliminating after work out swelling while avoiding dangerous bandaging mistakes.

- The Velcro® closures provide secure easy to use closure, with elastic support providing comfort as well
- Practical and functional avoiding the time consuming preparation and cleaning of traditional bandages.
- Fetlock protector in polyurethane reduces wear insuring that these boots will last.
