Revolutionary overreach boot designed for protection of the entire heel area. Useful for every discipline and can be used on all surfaces. The particular anatomic shape and protective material guarantees a perfect fit* on the horse's heel to give total protection.

* Not recommended for horses with very low heels.

- Anatomically designed protection in an elastic material that conforms perfectly to the horse's foot, therefore eliminating rotation of the overreach boot itself.
- Double point fastening to ensure a secure fit.
- **Carbon Fiber™**- Provide protection on heel area, which is at particular risk of injury and bruising.
- **Quick-release tips™**- in non-deformable FLEXTAN with stainless-steel hooks.
- **Velcro®**- pastern closure

MAGNETIK™

What is Magnetic Therapy?

Magnetic Therapy is a non-invasive drug free treatment of injuries. The magnetic fields stimulate blood flow and at the same time also help with cellular growth and ligaments repair. Because of their polarity, magnets draw blood to the area that they are placed in.

How does it work?

The cells, whose fundamental task is the production of energy, **have an electric voltage** that feeds a coordinated activity on a level of tissues and organs. In a situation of internal or external injury, cell activity is compromised and the consequences are inflammation, pain, etc. **The creation of a magnetic field by means of permanently magnetized NEODYMIUM plates having several polarities helps restore the biological energy, slowing down the physiological deterioration of tissues.**

Effects of magnetic fields:

The magnetic fields favor and facilitate lymphatic and blood microcirculation, the change and use of nutrient substances by the cells, the natural biological defense system and the elimination of metabolic waste matter. Moreover, the magnetic fields provide significant benefits in all inflammatory processes which are often accompanied by pain. The benefit is obtained through a reduction of the inflammatory process and, at the same time, an analgesic action with respect to the tissue nerve fibers.

Indications:

Magnetotherapy also stimulates vasodilatation, i.e. **increases the blood flow** to the injured part, **speeds up the elimination of dead cells and toxins, relaxes the muscles and reduces swelling.** The static magnetic energy also stimulates the production of **ELASTIN and COLLAGEN**, which are indispensable elements for the reconstruction of tissues.

Please consult your veterinarian before beginning any magnetic therapy treatment.

Equipped with **32 neodymium magnets** that develop a power of **2400 Gauss** each.

- **Outer Shell**- 420 Denier Breathable Micro-Mesh Nylon
- **Front Closure**- Single Buckle Front
- **Belly Closure**- Low Cross T-Lock Surcingle's
